nuveen

A TIAA Company

< The Problem >

>> How does the world perceive Nuveen and where do they stand in comparison to their competitors in the Market?

The BlackRock logo consists of the word "BlackRock" in a white, sans-serif font, centered on a solid black rectangular background.

BlackRock

< The Data >

- >> Utilizing Global Database of Events, Language and Tone, GDELT, Google BigQuery, and Google DataStudio. We used top 3 themes from each event to collect this data.
- >> We were able to gather over 70k rows of data related to Nuveen
- >> Over 13 Million rows for top 5 competitors (Blackrock, Vanguard, Fidelity, UBS, Goldman)

< The Solution >

GOAL:

- >> To find sentiment score that takes into account various elements we used NumMentions, NumSources to calculate appropriate weights for each.

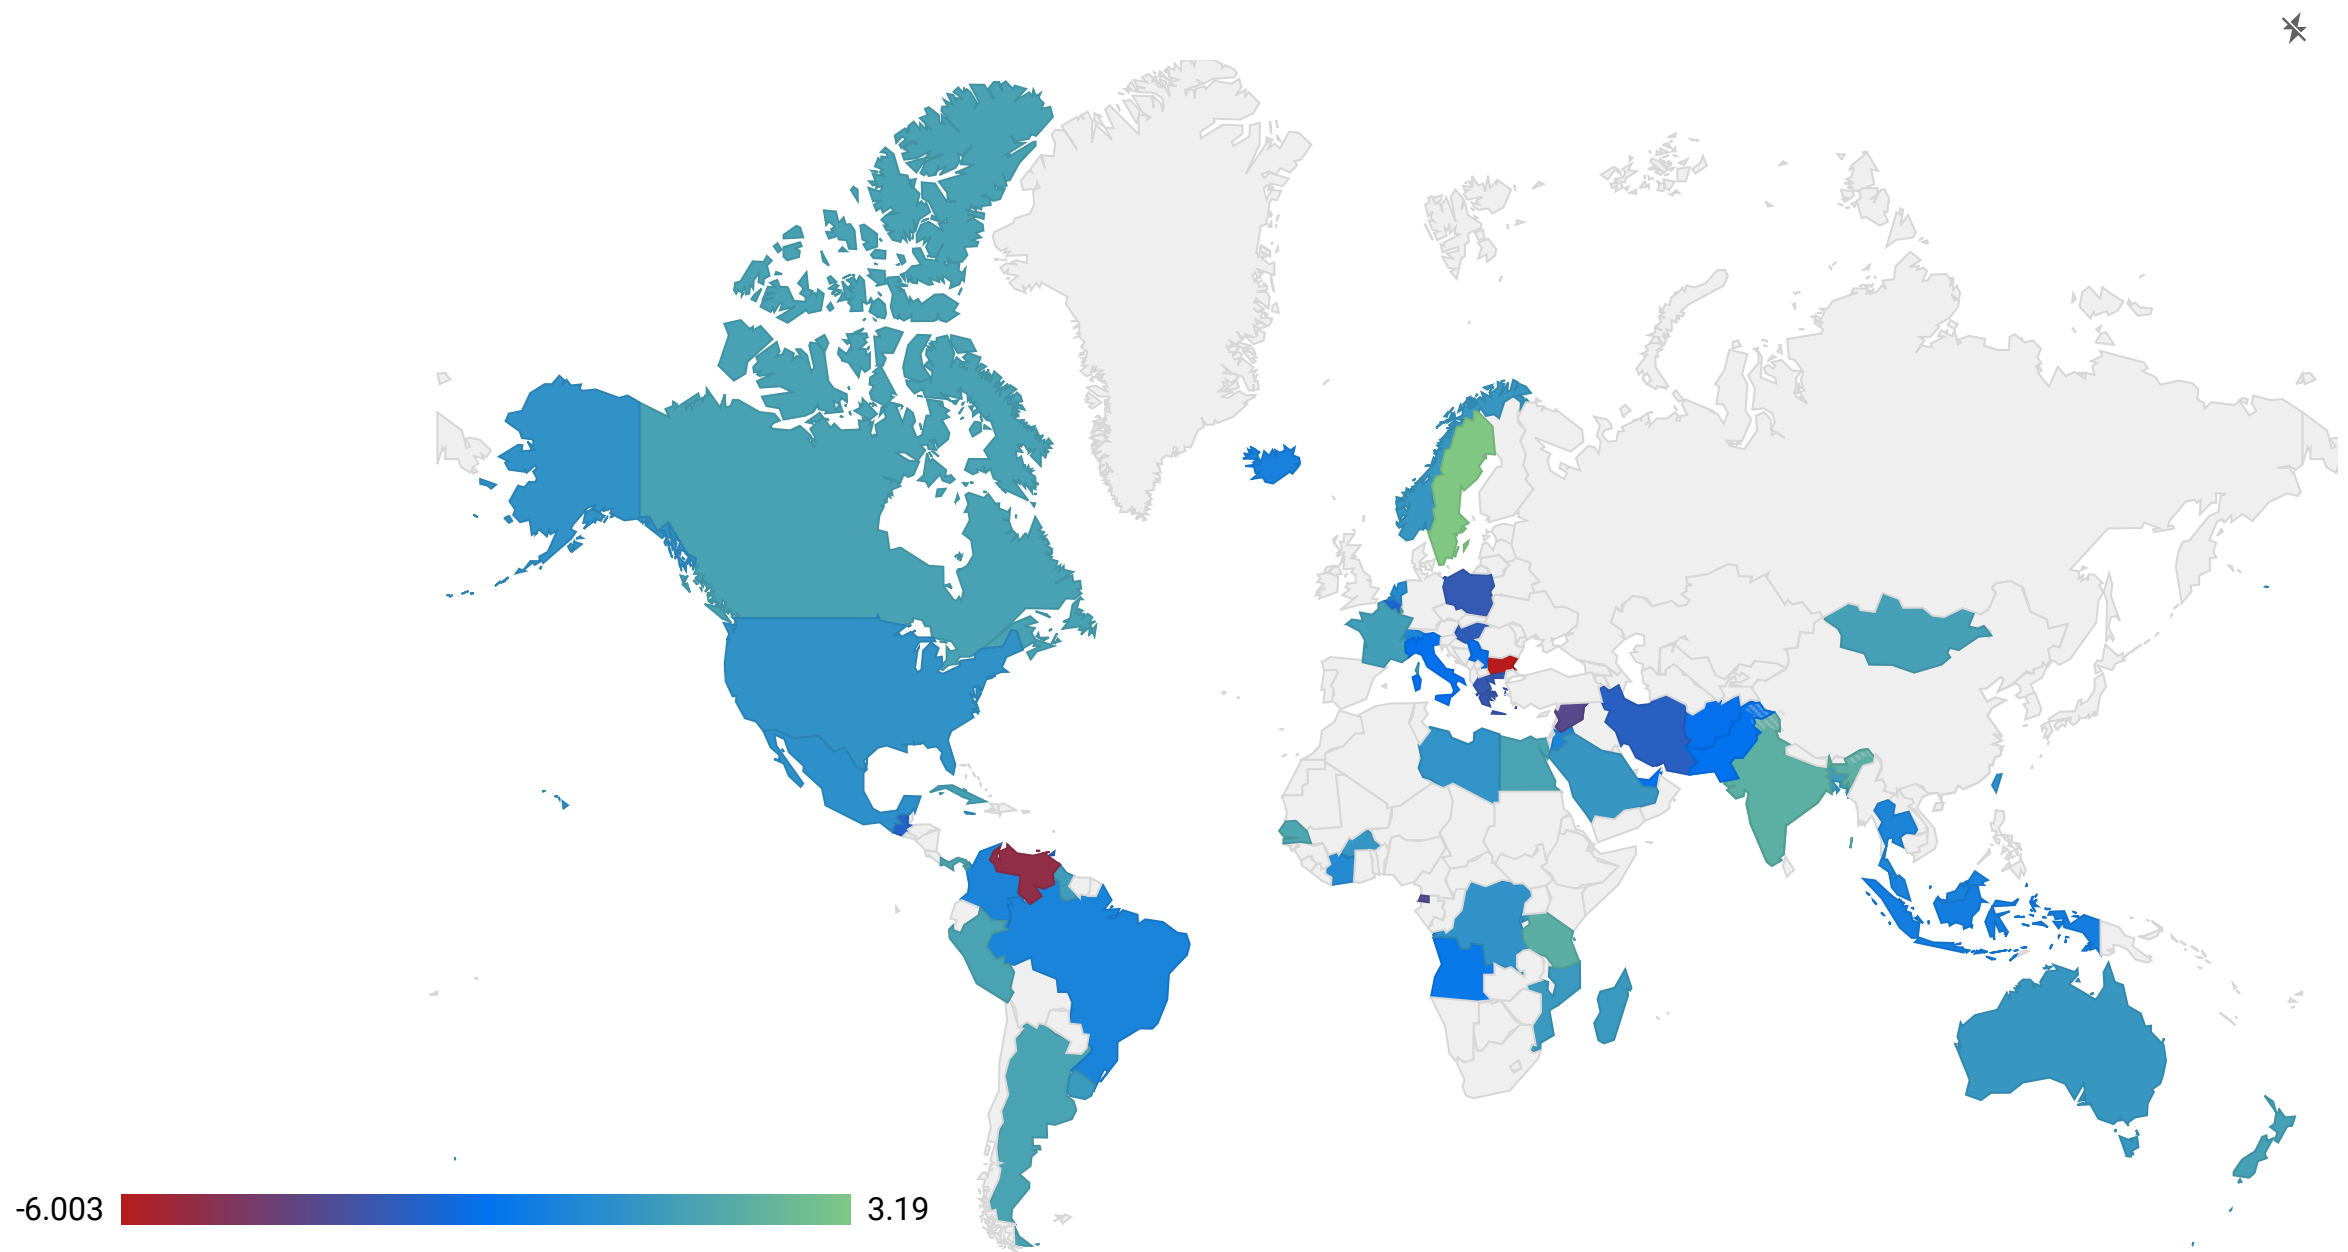

APPROACH:

- >> We looked at correlation between different elements, to guide our weightage calculation.
- >> Based on above data, we were able to create visualizations.

TOOLS USED:

- >> Due to large dataset (10 TB+), we relied on Google BigQuery to filter the data that we were interested in. By running several queries we extracted the data of interest into a series of tables in Google BigQuery. We used Google Studio to build visualizations and this presentation.
